For further information on William granville, please see the Wikipedia article, which has a short biography and links for further information. Granville's book "Elements of the Differential and Integral Calculus" fell into the public domain and then much of it (but not all, at the time of this writing) was scanned primarily by P. J. Hall. This wikisource document uses MathML and LATEX and some Greek letter fonts. The current LATEX document is due to David Joyner, who is responsible for the formatting, editing for readability, the correction of any typos in the scanned version, and any extra material added (for example, the hyperlinked cross references, and the Sage material). Please email corrections to wdjoyner@gmail.com. In particular, the existence of this document owes itself primarily to three great open source projects: TEX/LATEX Wikipedia, and Sage. More information on Sage can be found at the Sage website³. Some material from Sean Mauch's public domain text on Applied Mathematics, was also included.

Though the original text of Granville is public domain, the extra material added in this version is licensed under the GNU Free Documentation License,⁵ as is most of Wikipedia.

Preface

Figure 1: Sir Isaac Newton.

That teachers and students of the Calculus have shown such a generous appreciation of Granville's "Elements of the Differential and Integral Calculus" has been very gratifying to the author. In the last few years considerable progress has been made in the teaching of the elements of the Calculus, and in this revised edition of Granville's "Calculus" the latest and best methods are exhibited,—methods that have stood the test of actual classroom work. Those features of the first edition which contributed so much to its usefulness and popularity have been retained. The introductory matter has been cut down somewhat in order to get down to the real business of the Calculus sooner. As this is designed essentially for a drill book, the pedagogic principle that each result should be made intuitionally as well as analytically evident to the student has been kept constantly in mind. The object is not to teach the student to rely on his intuition, but, in some cases, to use this faculty in advance of analytical investigation. Graphical illustration has been drawn on very liberally.

This Calculus is based on the method of limits and is divided into two main parts,—Differential Calculus and Integral Calculus. As special features, atten-

tion may be called to the effort to make perfectly clear the nature and extent of each new theorem, the large number of carefully graded exercises, and the summarizing into working rules of the methods of solving problems. In the Integral Calculus the notion of integration over a plane area has been much enlarged upon, and integration as the limit of a summation is constantly emphasized. The existence of the limit e has been assumed and its approximate value calculated from its graph. A large number of new examples have been added, both with and without answers. At the end of almost every chapter will be found a collection of miscellaneous examples. Among the new topics added are approximate integration, trapezoidal rule, parabolic rule, orthogonal trajectories, centers of area and volume, pressure of liquids, work done, etc. Simple practical problems have been added throughout; problems that illustrate the theory and at the same time are of interest to the student. These problems do not presuppose an extended knowledge in any particular branch of science, but are based on knowledge that all students of the Calculus are supposed to have in common.

The author has tried to write a textbook that is thoroughly modern and teachable, and the capacity and needs of the student pursuing a first course in the Calculus have been kept constantly in mind. The book contains more material than is necessary for the usual course of one hundred lessons given in our colleges and engineering schools; but this gives teachers an opportunity to choose such subjects as best suit the needs of their classes. It is believed that the volume contains all topics from which a selection naturally would be made in preparing students either for elementary work in applied science or for more advanced work in pure mathematics.

1.1 Formulas for Reference

For the convenience of the student we give the following list of elementary formulas from Algebra, Geometry, Trigonometry, and Analytic Geometry.

$$(a+b)^{n} = a^{n} + na^{n-1}b + \frac{n(n-1)}{2!}a^{n-2}b^{2} + \frac{n(n-1)(n-2)}{3!}a^{n-3}b^{3} + \cdots + \frac{n(n-1)(n-2)\cdots(n-r+2)}{(r-1)!}a^{n-r+1}b^{r-1} + \cdots$$

when $b^2 - 4ac > 0$, the roots are real and unequal;

Cos Sin Cot Tan Degrees Radians

You can create a table like this in Sage:

```
sage: RR15 = RealField(15)
sage: rads1 = [n*0.0175 for n in range(1,6)]
sage: rads2 = [0.0875+n*0.0875 for n in range(1,9)]
sage: rads = rads1+rads2
sage: trigs = ["sin", "cos", "tan", "cot"]
sage: tb1 = [[eval(x+"(%s)"%y) for x in trigs] for y in rads]
sage: tb1 = [[RR15(eval(x+"(%s)"%y)) for x in trigs] for y in rads]
sage: print Matrix(tb1)
[0.01750  0.9998  0.01750  57.14]
[0.03499  0.9994  0.03502  28.56]
[0.05247  0.9986  0.05255  19.03]
[0.06994  0.9976  0.07011  14.26]
[0.08739  0.9962  0.08772  11.40]
[ 0.1741  0.9847  0.1768  5.656]
[ 0.2595  0.9658  0.2687  3.722]
```

```
[ 0.3429  0.9394  0.3650  2.740]
[ 0.4237  0.9058  0.4677  2.138]
[ 0.5012  0.8653  0.5792  1.726]
[ 0.5749  0.8182  0.7026  1.423]
[ 0.6442  0.7648  0.8423  1.187]
[ 0.7086  0.7056  1.004  0.9958]
```

The first column are the values of $\sin(x)$ at $x \in \{0.01750, 0.03500, ...0.7875\}$ (measured in radians). The second, third and fourth rows are the corresponding values for cos, tan and cot, resp.

1.5 Logarithms of Numbers and Trigonometric Functions

The common logarithm is the logarithm with base 10. The fractional part of the logarithm of x is known as the *mantissa* of the common logarithm of x. For example, if x = 120, then

$$\log_{10} 120 = \log_{10} (10^2 \times 1.2) = 2 + \log_{10} 1.2 \approx 2 + 0.079181,$$

so the very last number (0.079181...) is the mantissa. In the table below, this is given simply as 0792.

Table of mantissas of the common logarithms of numbers:

The table of logarithms of the trigonometric functions (given in Granville's original text) is omitted as they can be computed using a hand calculator or Sage.

1.6 Sage Testing

This is an example of using Sage within a TEX document. We can compute extended values like

$$32^{31} = 45671926166590716193865151022383844364247891968$$

We can plot functions like $x \sin x$:

We can integrate:

$$\int \frac{x^2 + x + 1}{(x - 1)^3 (x^2 + x + 2)} dx$$

$$= -\frac{9}{448} \sqrt{7} \arctan\left(\frac{1}{7} \sqrt{7} (2x + 1)\right) - \frac{3(x + 1)}{16(x^2 - 2x + 1)} + \frac{5}{128} \log\left(x^2 + x + 2\right) - \frac{5}{64} \log(x - 1)$$

We can perform matrix calculations:

$$\begin{pmatrix} 468 & 576 & 684 \\ 1062 & 1305 & 1548 \\ 1656 & 2034 & 2412 \end{pmatrix}$$

$$AB = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} \begin{pmatrix} 5 & 6 \\ 6 & 8 \end{pmatrix} = \begin{pmatrix} 17 & 22 \\ 39 & 50 \end{pmatrix}$$

Plots are fun; here is a second one showing $x \ln x$. The "width" command in the source is sent to the include graphics command in LaTeX rather than to Sage.

Sage understands mathematical constants and writes them symbolically unless it is told to produce a numerical approximation. The term $e\pi$ below is not in the LaTeX source; instead it is the result of a Sage calculation, as is the numerical value on the other side of the equal sign.

The product of e and π is $\pi e = 8.53973422267357$.
